Face Capture
With embedded deep learning based algorithms, the camera is able to give the best shot of a target face through detecting, tracking, capturing, grading, and selecting. The camera captures faces and outputs the features such as gender, age, and expression.

The camera uses the face exposure function to dynamically adjust the face area exposure of captures and ensures high face picture quality.

Perimeter Protection
With embedded deep learning-based target detection and classification algorithms, the camera carries out the duty of perimeter protection, monitoring the actions of line crossing, intrusion, region entrance, and region exiting. The algorithms greatly filter out mistaken alarms caused by the interference of leaves, lights, animals, flags, etc.

Multi-Target-Type Recognition
With the embedded deep learning algorithms, the camera detects and captures faces, human bodies, and vehicles in the specified region and outputs the features such as gender, age, top color, and vehicle type.
